# Kazadi Mukendi (Full-Stack Web Developer)

+27681252703 | kazadishadrackmukendi@gmail.com | www.linkedin.com/in/kazadi-mukendi-a69122371 | https://github.com/KMukendi10 | https://kazadi-mukendi-portfolio.vercel.app/

*Full-Stack Web Developer transitioning from Mechanical Engineering. I build complete web applications, from the interface to the data behind it, that are easy for users to use and for a team to maintain. Engineering and quality-control experience means I diagnose problems methodically and test before shipping. Completing iHub Africa's Full-Stack programme with Zaio Institute of Technology; studying a BSc in Computing at UNISA.*

## EDUCATION

**Unisa** — **Remote**
*Bachelor of Science In Computing NQF 7* — *February 2026 – Ongoing*

**iHub Africa x Zaio Institute Of Technology** — **Johannesburg**
*Full Stack Web Development NQF 5* — *March 2026 – September 2026*

**Ekurhuleni West College** — **Germiston**
*Mechanical Engineering N4-N6* — *June 2021 – October 2022*

## PROJECTS

**Airbnb Clone** / *React, CSS, Node.js, Express, MongoDB*

- Built a short-term rental platform as three independent apps (guest frontend, admin dashboard, backend API) so each can be deployed, secured and scaled on its own.
- Designed separate guest and admin experiences with role-based access, so only the right people can manage listings and bookings.
- Deployed the guest frontend on Render and resolved cross-origin (CORS) issues between the apps.

**Urban Threads** / *HTML, CSS, JavaScript, Firebase Auth, Firestore DB*

- Built an online store where a shopper's cart is saved to their account, so it survives a refresh or a device switch and fewer sales are lost to abandoned carts.
- Let visitors browse and search without an account, and only asked for login at "Add to Cart", which cuts the sign-up friction that drives shoppers away.
- Loaded products dynamically with filtering, search and pagination, so a retailer can change the catalogue without touching code.

**Book Library** / *React, CSS, JavaScript, Open Library API*

- Built and deployed a book search app on a live third-party API, with loading and error states so users never hit a blank screen.
- Used submit-triggered search to cut request volume against a free API with no rate-limit budget, which protects the service the app depends on.

**iHub Website Prototype** / *HTML, CSS, JavaScript, Git Workflows*

- Built a responsive multi-page website prototype designed to give iHub Africa a credible online presence and a clear path for visitors to join its programmes.
- Protected delivery as Git Manager by reviewing every pull request before merging, so six people's changes reached main without unresolved conflicts.

## EXPERIENCE

**Tirisano Cellular Insurance** **February 2023 – June 2024**

*Technician/Quality Controller* *Boksburg*

- Diagnosed and repaired mobile phones day to day, using Excel, Samsung OQC and Huawei HiSuite to track faults, update software and verify quality.
- Verified part compatibility by model/specs and tracked stock in Excel to avoid incompatible orders and support smoother repair turnaround.
- Ran QC on refurbished devices (battery, camera, sensors, connectivity, hardware) against quality standards, logging results and rework issues so faults were fixed before delivery.
- Documented faults and completed follow-up maintenance, keeping a clear record of each device.

**Robtronics** **August 2024 – December 2024**

*Technician* *Sandton*

- Diagnosed and troubleshot faulty electronic devices as part of the refurbishment process, getting them back to working condition.
- Carried out repairs, component replacements, software updates and functional testing across a range of devices.
- Conducted quality-control checks so refurbished devices met required standards before they left the workshop.
- Recorded faults, repairs and test results to support tracking and quality assurance.

## TECHNICAL SKILLS

**Programming Languages:** HTML, CSS, JavaScript, Python, C++

**Front-End Development:** React, Next.js, Responsive Web Design, DOM Manipulation, API Integration

**Back-End Development:** Node.js, Express, MongoDB, REST APIs, Firebase, Firestore, PostgreSQL (Supabase)

**Version Control & Deployment:** Git, GitHub & Git Bash, Vercel, Netlify, GitHub Pages, Render

**UI/UX:** Responsive Design, CSS Flexbox, CSS Grid

**Engineering Software:** AutoCAD, Autodesk Inventor, G-Code Programming

**Productivity Tools:** Microsoft Word, Excel, PowerPoint, Canva, Figma
